Driving Business Success from Enterprise Mobility with SAP® Education Offerings

Giving your employees the instruction they need is essential to making enterprise mobility a reality for your business. With a comprehensive set of courses and certifications for enterprise mobility, available live and online, the SAP Education organization provides the training you need, when and where you need it.

Summary

Enterprise mobility training and certification from the SAP® Education organization offers hands-on project team training. Our SAP experts provide instruction for mobility architects, mobile application developers, Sybase® Unwired Platform administrators, and SAP Afaria® mobile device management solution administrators. We aim to ensure that everyone using our mobile solutions can bring faster time to value and improve business outcomes.

Business Challenges

- Increase productivity through enterprise data access from mobile devices
- Lower total cost of ownership by managing all mobile devices with a single system
- Extend back-end environments and applications to mobile devices

Key Features

- **Graphical modeling** – Exchange data from traditional back-end systems systems, such as databases, Web services, and applications, to multiple mobile devices
- **Integrated development platform** – Create enterprise-grade applications, including lightweight Web-based applications or native custom applications
- **Applications everywhere** – Consume enterprise-grade applications on corporate and personal devices
- **Secure data transport** – Control enterprise data with end-to-end encryption and enhanced application security

Business Benefits

- **Smooth integration** to a variety of back-end data sources, with online and offline access to data
- **Flexible, open infrastructure** responds to evolving device type and data sources
- **Business workflow mobility** without the need for development expertise
- **Integrated mobile device management** and application provisioning
- **One administrative console** to manage, secure, and deploy mobile data, apps, and devices
