

Daiichi Sankyo Europe: Teaming Microsoft SharePoint and SAP® Applications Through Duet® Enterprise

An R & D leader in the costly pursuit of effective, lifesaving pharmaceuticals, Japan-based Daiichi Sankyo optimized work processes by enabling staff to work with equal facility with two software standards: Microsoft SharePoint and SAP® applications. Key was Duet® Enterprise software, which **created a harmonized software environment** for Daiichi Sankyo Europe GmbH and the European subsidiaries. Partner Alegri International Service GmbH assisted.

Simplifying internal settlement

By teaming two office standards

Objectives

- · Optimize work processes
- Enable staff to work with equal facility with the two software standards in use at the company, Microsoft SharePoint and SAP® applications
- Redesign internal settlement process to simplify it

Why SAP

- Duet® Enterprise software, which connects Microsoft SharePoint and SAP software
- Software that provides a choice of predefined operational scenarios for SAP and Microsoft software, such as for workflows, reporting, and document management
- Product based on standard architecture, which supports the integration of software from other service providers

Why partner

- Specialists in Duet Enterprise software and Microsoft SharePoint
- Extensive experience in optimizing business processes

Benefits

- Enter accounting data quickly into Microsoft Office forms
- Generate SAP software–based postings in the Microsoft Office environment
- Trigger offsetting postings in SAP software

Future plans

Use Duet Enterprise for other processes
