SAP Rapid Deployment Solutions
Rapid Data Migration to SAP ERP and SAP CRM

Quick Facts

Overview

**Fast, Trusted Data Migration
to Your SAP® Solutions**

The Best-Run Businesses Run SAP™

Summary

Good business decisions and efficient processes depend on good data. But many companies experience lengthy postmerger integrations and overdue, overbudget data migration projects. SAP offers a package for rapid data migration to SAP® ERP and SAP Customer Relationship Management that accelerates and facilitates the migration of legacy data to these applications. This way, you can improve data quality and reporting and be confident of corporate and regulatory compliance.

Objectives

- Deliver data migration projects on time and within budget
- Provide trustworthy data across the enterprise
- Improve business process efficiency, compliance, and software user satisfaction with high-quality data

Solution

- Analysis and extraction of data from virtually any source system
- Data cleansing and loading
- Transformation to target data formats
- Data validation against specific customer business rules
- Reconciliation of loaded data against source data
- Reporting on and monitoring of all migration activities

Benefits

- Meet objectives for streamlined delivery of migration projects
- Provide trusted data for core processes and business users
- Establish an extensible foundation for ongoing data management and governance
- Reuse the package for ongoing integration projects

High-quality data is essential for efficient processes and decision making; but, in fact, suspect data from legacy systems and mergers is common. Bad data leads to unusable systems and bad reports; and if people don't trust the data, they don't trust the software that uses it. What's needed is a solution that streamlines data migration projects and delivers reliable data.

The package for rapid data migration to SAP® ERP and SAP Customer Relationship Management (SAP CRM) speeds and facilitates the migration of legacy data to these applications. The package lets you analyze and extract data from virtually any source. It cleanses and transforms data to target formats, validates data against customer business rules, and loads it into SAP ERP and SAP CRM.

The package lets you reconcile loaded data against source data and report on and monitor migration activities. It includes best-practices content for many data objects including customer and vendor master, business partner and transaction, and sales and purchase orders, to name a few.

Now you can deliver migration projects on time and within budget and provide trustworthy data for better decision making. You can improve reporting and user satisfaction with enterprise software. The package enables compliance and helps ensure quality master data for efficient core processes. You can establish a solid, extensible foundation for ongoing data management and data governance and reuse the package for ongoing integration with source solutions.
